

QUORION Quorilog

The Quorilog is a peripheral device for recording data and back-ups from QUORiON cash registers to a commercial SD Card (secure digital). The module connects to the RS-5V interface on the cash registers and functions as an external or internal (factory option only) device. Its primary purpose is to store the electronic journal.

List of approved SD-cards

The following SD-cards were tested and approved by the QUORiON developing department. Other (local available) brands should be tested by the distributors themselves.

Manufacturer	Brand name / Specification	Capacity
extreMemory	ALLROUND	1 GByte
