

Did You Know...

...that you can use a trick to send pre-programmed messages from your cash register to the kitchen printer?

Here's how!

Create a Department in which you deactivate all print options and only set-up a connection to the kitchen printer. Next, program the message to be transmitted as a PLU and set its price equal to ZERO. Then, associate the PLU with the before mentioned department. During booking, the ECR will then only send the PLU to the kitchen printer and not print it on the receipt or invoice.
