

Did you already know ...

that from version xx050907 it is possible to scan any balance numbers?

OPTION 255, when set then ALL codes scanned with a scanner which is connected to scanner port# 2 (PARAMETER 57) are ALWAYS processed as balance codes (also see PARAMETER 103) This can be used when the balance codes don't start with 9 or when they are in a non standard code format. When you want to use normal scanning at the same time you can connect a second scanner on port # 1 (PARAMETER 56). When PARAMETER 103 is ZERO it will use BALANCE function# 1 else it will use the balance function as programmed in PARAMETER 103.
