

Did You Know...

...that if you set the MODIFIER function OPTION1-1 and 1-2 you can use this modifier to put a scan code on the keyboard. When this modifier is used the register will use the number programmed in the text field as an article number. This function can be used to put PLU SCANCODES on the keyboard so it is no longer required to re-program the keyboard when PLU's are created and/or deleted. Note that when you set OPTION1-2 this modifier CANNOT be used.
