

Did you already know ...

that from version xx050907 it is possible set a balance limit?

BALANCE LIMIT, when in the BALANCE configuration the “Balance Limit” is activated the register will now check if the balance reaches the limit when ordering and the limit field is NON ZERO. When you try to register an item which brings the balance total over the limit the register will give ERROR# 60 (OVER BALANCE LIMIT). Note that the LIMIT is NOT checked when you have “Free Assignment of Number” active in the balance configuration because then there is no link between the balance record and the balance number.
